Abstract: A cigarette-substitutional stick with health-care function while retaining a smoking behavior is composed of cigarette-shaped shell containing a pneumatic health-care liquid, valve mechanism in shell and nozzle as end cover. Said valve mechanism consists of valve switch, valve core, valve cylinder, reset spring of valve core and filter core. Said valve switch can be actuated by mouth, and then the nozzle can spray health-care liquid into mouth cavity, where it forms a smoke-like state. Its advantage is high effect.
